Course description

Neuro-Developmental Treatment is an advanced hands on approach provided in various formats to physical therapists, occupational therapists, and speech-language pathologists, to understand and manage the functional limitations of children with cerebral palsy which affects movement and function. The approach was developed to enhance the function of cerebral palsy children who have difficulties in controlling movement resulting from neurological challenges. **This workshop designed to Provide the hands on training on special children For each participants.**

Change is possible:

The NDT therapist analyses the motor, sensory and cognitive impairments that impact on the achievement of functional skill development. The main aim of NDT treatment is to encourage the child's ability and directs the normal movements by hands on approach and educating parents.

Course Instructor.

J.Ramesh kumar , MPT,NDT.

He is nationally renowned NDT therapist & Instructor, is known for his hands-on clinical approach to the treatment of children with cerebral palsy. Ramesh received his training and certification in NDT from NDTA, USA.
